

Philippi

The Pictorial Library of Bible Lands provides PowerPoint files in addition to individual jpg images. This may make it easier for those using PowerPoint to quickly copy and paste slides into their own presentations. The PowerPoints also have some measure of organization (usually in a logical tour sequence), whereas the jpg images are listed alphabetically. Note though that the PowerPoint files do not include the highest-resolution images (1600x1200 or higher) for reasons of space and performance. The images in the PowerPoints are approximately 1024x768 (XGA), the maximum that most projectors and many monitors are capable of. Users will particularly benefit from accessing the individual higher-res jpg images if 1) they have a projection system higher than XGA; 2) they want to zoom in on a particular portion of an image; 3) they want to crop, edit, adapt, or print an image. See also the "Readme" file for more information and tips.
